

Generic Command Output

 CHECKCENTRAL

 BINARYFORTRESS

PowerShell Script: Route Results of Command to CheckCentral

This simple PowerShell script can be used to route the results of a command to CheckCentral. To use, simply edit the script & set the following variables:

- `$cmd` - Set this to the command you would like to run. In the example, we're checking on the health of Active Directory replication using the `repadmin` command.
- `$msgAddress` - Set this to your CheckCentral email address. If the check you've created has its own check-specific email address, you can enter that in here.
- `$msgSubject` - This will be the subject line of the email that gets sent to CheckCentral. You can set to whatever you'd like.

Note: This script will send email via CheckCentral's SMTP server, but if you'd like to use a different SMTP server, you can change `$smtpServer` and `$smtpPort`.

The script is now ready to run. You can run it as needed, or schedule it via Task Scheduler in Windows.

Troubleshooting

As always, if you run into any trouble configuring your Checks, please feel free to [contact us](#) and we'll be glad to help out.

About CheckCentral

CheckCentral Monitoring consolidates and simplifies backup, system, and software email updates into a clean, graphical dashboard, bringing peace of mind to IT administrators of SMBs, Enterprises, and MSPs.
